5. [Currently Amended] An apparatus, comprising:  
a plurality of deposit elements to deposit biological materials on a depositing surface;  
a first mounting assembly operatively coupled to enable movement of the deposit elements, wherein the first mounting assembly comprises a first rotatable element and permits the deposit elements to rotate around a first axis perpendicular to the depositing surface;  
a second mounting assembly operatively coupled to enable movement of the deposit elements, wherein the second mounting assembly comprises a second rotatable element and permits the deposit elements to rotate around a second axis parallel to the depositing surface; and  
a third mounting assembly operatively coupled to enable movement of the deposit elements, wherein the third mounting assembly comprises a third rotatable element and permits the deposit elements to rotate around a third axis to the depositing surface.
6. [Original] The apparatus of claim 5, wherein:  
the deposit elements include pins, quills, or jetting elements.
7. [Original] The apparatus of claim 5, wherein:  
the second and third axes are perpendicular to each other.
8. [Currently Amended] The apparatus of claim 5, wherein:  
the first mounting assembly is movable rotatably independently of one or both of the second and third mounting assemblies such that movement-rotation around the first
